WORKING EXPERIENCE

MARCH 2015 – JANUARY 2017

Rede Linux , IME - USP
Network Administrator

In this mid time, I worked with a team that was responsible for taking care of a computer network called "Rede Linux". This network is used by the graduation students at the Institute of Mathematics and Statistics (part of University of São Paulo. Working on it, I had the chance to learn many things such as how a computer network works, and I had to search about a couple of things about implementation of services like CUPS, Puppet and others. Our team's functiom was to keep that working and implement things to improve user's experience. This was my first woring experience, and it certainly taught me valorous lessons, not only about computers themselves, but about communicating with costumers
